INTRODUCTION

BONFIX B.V. supplies a large range of BONFIX brass boiler filling cocks in brass and brass nickel plated models.

TECHNICAL INFORMATION

The technical specifications are based on the current industry and regulatory status. BONFIX B.V. reserves the right to modify technical specifications without prior notice. No rights can be derived from the technical information provided in this brochure.

GENERAL

BONFIX boiler filling cocks are designed for the filling and draining of radiators and central heating installations.

PRODUCT USAGE

BONFIX boiler filling cocks can be used in central heating systems, water supply and irrigation systems. Other forms of usage, depending on pressure/ temperature and medium, may be admissible but require prior written approval by BONFIX B.V.

TECHNICAL SPECIFICATIONS

BONFIX boiler filling cocks are manufactured from premium quality brass (CuZn40Pb2) and provided with a ball valve with an open and closed position, a long exterior tapered thread, and a heavy duty hose fitting. BONFIX boiler filling cocks can be used in systems with an operating pressure not exceeding 1000 kPa (10 bar) and a temperature not exceeding +90 °C.

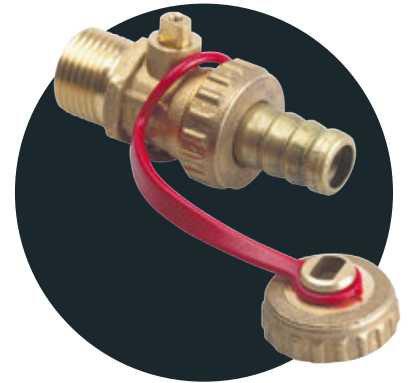

QUALITY MARK

BONFIX boiler filling cocks do not bear a quality mark.

INSTALLATION INSTRUCTIONS

For sealing the connection, we recommend the use of an approved GASTEC tape on the long exterior thread. When opening or closing the fill/drain valve, cap or lever, never rotate more than ¼ turn.

Other forms of usage, depending on pressure/temperature and medium, may be admissible but require prior written endorsement by BONFIX B.V.

Use appropriate tools for installation and prevent damage.

WARRANTY AND LIABILITY

Warranty and liability apply as per our general terms and conditions.

Damage caused by stress corrosion is not covered under product warranty.
